Projects

Book Master - Bookkeeping App

- Constructed a full **LAMP** stack application for companies to utilize in book keeping.

- Incorporated **React** for the front-end to create a sharp user experience using **React**'s render lifecycles

- Logged, stored, sorted, and listed all items using **SQL** queries through the secure backend built on **Node.js**.

- Technologies: React, Node.js, MySQL, Express, Git

AdMe - Creator Based Ads App

- Collaborated with a team to create an application in which content creators could make advertisements for companies running ad campaigns.

- Implemented **React** routers to simulate cross-page navigation with history object allowing for a more fluid user experience

- Built **Node** endpoints with **Express** and segregated files with routers

- Utilized **multer**, a node middleware to parse media extension files to allow for upload of videos and photos for ad campaigns.

Education

University of California, Irvine (2012 — 2017)

- Graduated with a Bachelors of the Arts, English Literature

LearningFuze Coding Bootcamp (2019)
